

Project Status report

Name:	Abraham Mugerwa
Community (UN SD goal):	Regina Elementary Schools(#2 Zero Hunger)
MVP #	3
Sprint cycle dates:	Nov 16 – Nov 30 th , 2021

Project Name	Eatable
Blurb	Focusing on SDG goal number 2(Zero Hunger), my application is designed to allow restaurants to be able to easily donate their leftover meals to Regina elementary schools in their area. The community in need is the Regina elementary school kids who are not able to afford to bring their own lunches to school and can go without food in a school day. Since restaurants have a lot of excess food leftover, I see an opportunity for them to be able to donate those meals and help build a relationship with the community in need whilst helping lower the number of people that go hungry.
For Week Ending	November 30 th , 2021
Project Status	Green
Status Description	MVP #3 activities planned were completed

Activities—During the past sprint cycle

- Removed pricing from displaying on cart, checkout, and complete order pages
- Improved the menu to have custom food options
- Added some gamification to home page for restaurant
- Completed all required final documentation

Project Issues

The achievements for the restaurant such as badging is not 100% finished. I wish to add a leaderboard to show other restaurants list of donations. There is no way to show how many points have been accumulated by the restaurants for the badges. Still working on a solution.

Project Changes

Removed the fridge inventory chart from the home page for restaurants and replaced it as a page to show stats for the restaurants such as achievements received from donating items, to provide some gamification.

Activities—Planned for Next Week

Completing documentation for overall project.
Project commercial.

Reflection

Do you feel "on track"?

I feel like I am on track as I completed all the required tasks set out, and was able to add a feature for gamification that I will work on more in the future

What progress do you particularly feel good (great) about?

I am happy I was able to remove the pricing from the pages as it was giving me a lot of problems, and also now that the menu items are now customizable for restaurant managers

What barriers (if any) do you feel is/are a current impediment to success?

None other than the limitations with free plugins

What help (if any) do you require to move positively forward?

No extra help needed during this sprint.

What questions or concerns do you have (if any)?

None at this time
