

## Project Status report

Name:	Abraham Mugerwa
Community (UN SD goal):	Regina Elementary Schools(SDG#2: Zero Hunger)
MVP #	2
Sprint cycle dates:	Nov 1st – Nov 15th, 2021

Project Name	This section contains the project name that should appear consistently on all project documents. Organizations often have project naming conventions.
Blurb	In support of the UN SDG #2(Zero Hunger) the application eatable aims to provide restaurants a simple way to donate leftover food to Regina elementary schools. Restaurants can package leftover foods, choose how many items they are donating on the app, and then process it to have it be picked up by a volunteer. It will then be distributed to a designated school in their area.
For Week Ending	November 15th, 2021
Project Status	Green
Status Description	All planned activities were achieved

### Activities—During the past sprint cycle

- Cleared some issues with WooCommerce displaying cost on products cart
- Found a plugin called ShipDay to help track drivers for deliveries.
- Using API key generate on shipday, I added that to the woocommerce page settings.
- generated REST API key which is used for updating the order status in woocommerce.
- Added the API consumer key and consumer secret key to Shipday settings.
- In order for the woocommerce and shipday app to provide real time information between each other I had to create a webhook to allow the two systems to sync together
- Set up account for driver
- Create a sign up sheet page for volunteer drivers.

### Project Issues

There is not much configuration within the shipday app so there is some strange things showing up for volunteer drivers such as tip amounts made, even though I've removed automatic tip calculating.  
Still have not found a way to completely hide signs of billing so even though all prices are \$0 they are still visible in certain parts throughout the site navigation.  
On wordpress, woocommerce does not complete the order after it is completed on shipday.

### Project Changes

N/A

### Activities—Planned for Next Week

- Landing page to redirect users for restaurant managers, and for volunteers
- Stats page for restaurants of their donations
- Menu customization
- Link all pages together.

### Reflection

Do you feel "on track"?

Yes I feel like I have made good progress so far

What progress do you particularly feel good (great) about?

I think the individual pieces from the two MVP's are good. I just will have to tie all the pages together for the next and final MVP

What barriers (if any) do you feel is/are a current impediment to success?

Other than figuring out which plugins are helpful to achieve what I want, as well as premium features in many of the plugins that would have been helpful, I am working around it as best as possible.

What help (if any) do you require to move positively forward?

Some tips on how to edit html on plugins that use shortcode, as there is otherwise not much you are able to move around.

What questions or concerns do you have (if any)?

Some more ideas on gamification for my application
