

Business case

Name:	Abraham Mugerwa
Community (UN SD goal):	Regina Elementary schools(Goal # 2)
Date:	2021/10/05

Proposed Project	Eatable – A food delivery Program that provides meals to Regina Elementary school kids as well as families in need through the support of local restaurants.
Date Produced	October 5, 2021
Background	According to the World Food Programme, 135 million suffer from acute hunger largely due to man-made conflicts, climate change and economic downturns. The COVID-19 pandemic could now double that number, putting an additional 130 million people at risk of suffering acute hunger by the end of 2020. With more than a quarter of a billion people potentially at the brink of starvation , swift action needs to be taken to provide food and humanitarian relief to the most at-risk regions.
Business Need/ Opportunity	I believe there is an opportunity for communities to step up and help those in need in a way that is simple and easy. Since we see a lot of food everyday go to waste from restaurants, or people unsure of what they can and cannot donate, this application intends to help restaurants and surrounding members of the community provide meals for school kids in need to reduce waste. In Regina, there is a lack of facilities for underprivileged school kids to access free meals at school. Although there are some small programs that try to help provide for such kids, I believe there is an opportunity for restaurants to donate food that would otherwise be thrown out, and instead contributing it to schools in their community.
Options	<ul style="list-style-type: none">- Provide food pickup from restaurants and store them in a fridge on school grounds.- Allow restaurants to interact directly with schools and drop items off themselves during lunch hours.- Provide alternative pickup locations for outside of school hours, such as evenings weekends.- Deliver meals to homes via request and use of delivery drivers.

Cost-Benefit Analysis

[This section contains the detailed costs and benefits of each option listed in the previous section. The costs may include considerations such as financial expenditures, the amount of time required, possible risks, and the potential for reduced quality. The benefits may include the potential of increased sales, market share, and brand recognition and the reduction of errors and ongoing costs. Each option should be clearly identified and listed separately.]

This project stands to benefit society by helping provide an essential and basic need for humans. By choosing to focus on providing meals for elementary school kids, society stands to benefit by helping them to focus on their education and allowing them to reach their full potential to where they can make an impact in the future for their generation and the ones to follow. This project also should allow future integration into other communities.
